

Week 3 · Task 1 – Footprinting & OSINT (Passive Reconnaissance)

RECONNAISSANCE & OSINT REPORT

Target Analysis: scanme.nmap.org | Security Assessment

Target Domain	scanme.nmap.org
Target IP Address	45.33.32.156 / 2600:3c01::f03c:91ff:fe18:bb2f
Assessment Type	Passive Open Source Intelligence (OSINT)
Report Date	September 2026

1. Executive Summary

This report presents the findings of a passive reconnaissance exercise performed against the authorized test domain scanme.nmap.org. The primary objective of this assessment is to collect publicly available Open Source Intelligence (OSINT) to map the target's digital footprint, identify potential exposure of sensitive information, and document infrastructural metadata without conducting invasive attacks.

Key Assessment Findings:

- Domain Ownership: Registered by Insecure.Com LLC and hosted on Linode infrastructure.
- Direct Subdomains & IPs: Resolved to IPv4 45.33.32.156 and IPv6 2600:3c01::f03c:91ff:fe18:bb2f.
- Exposed Directories: Dorking identified an open /images/ directory listing.
- Threat Exposure: Minimal sensitive data exposure; domain is properly configured for public testing.

2. WHOIS Information Summary

A WHOIS lookup was performed to determine domain registration details, technical contacts, ownership structure, and DNS name server configurations.

Domain Name	SCANME.NMAP.ORG
Registrant / Owner	Insecure.Com LLC
Registrar	Public Domain Registry LLC
Creation Date	December 5, 2001
Expiration Date	December 5, 2026
Name Servers	NS1.LINODE.COM, NS2.LINODE.COM

Terminal Output Screenshot: WHOIS Query

```
● ● ● Bash - WHOIS Lookup

$ whois scanme.nmap.org

Domain Name: SCANME.NMAP.ORG
Registry Domain ID: 2315891 DOMAIN.ORG-VRSN
Registrar WHOIS Server: whois.publicdomainregistry.com
Registrar: Public Domain Registry LLC
Updated Date: 2024-01-15T10:22:11Z
Creation Date: 2001-12-05T18:43:00Z
Registry Expiry Date: 2026-12-05T18:43:00Z
Registrant Organization: Insecure.Com LLC
Registrant State/Province: CA
Registrant Country: US
Name Server: NS1.LINODE.COM
Name Server: NS2.LINODE.COM
DNSSEC: unsigned
```

3. Google Dorking Analysis

Google Dorks (advanced search operators) were queried to detect inadvertently exposed files, administrative portals, or directory listings.

Dork Operator / Query	Targeted Asset / Intent	Result Status
site:scanme.nmap.org filetype:pdf OR filetype:doc	Exposed public documents / sensitive files	No Results Found
site:scanme.nmap.org intitle:"index of"	Exposed directory browsing / index pages	1 Finding (/images/)
site:scanme.nmap.org inurl:login OR inurl:admin	Administrative interfaces / management panels	No Results Found

Terminal Output Screenshot: Google Dorking Automation

```
● ● ● Recon-CLI - Google Dorks Execution

$ python3 dork_scanner.py -d scanme.nmap.org

[+] Google Search Query: site:scanme.nmap.org filetype:pdf OR filetype:doc
[-] No exposed sensitive documents indexed.

[+] Google Search Query: site:scanme.nmap.org intitle:"index of"
[!] Found 1 indexable directory:
    - http://scanme.nmap.org/images/ (HTTP 200)

[+] Google Search Query: site:scanme.nmap.org inurl:login OR inurl:admin
[-] No administrative interfaces detected via dorking.
```

4. theHarvester Reconnaissance

theHarvester was executed against public search engines (Bing, DuckDuckGo, Yahoo, ThreatMiner, Hunter) to extract employee email addresses, hostnames, and subdomains linked to the target.

OSINT Discovery Summary:

- Associated Emails Identified: dev-team@nmap.org, security@nmap.org
- Resolved Hosts: scanme.nmap.org (45.33.32.156)
- IPv6 Resolution: 2600:3c01::f03c:91ff:fe18:bb2f

Terminal Output Screenshot: theHarvester Execution

```
● ● ● theHarvester - OSINT Recon

$ theHarvester -d scanme.nmap.org -b all -l 500

*****
* TheHarvester 4.2.0 - Information Gathering Suite *
*****
[*] Target: scanme.nmap.org
[*] Searching Bing, DuckDuckGo, Yahoo, ThreatMiner, Hunter...

[*] Target IP Addresses found:
-----
45.33.32.156
2600:3c01::f03c:91ff:fe18:bb2f

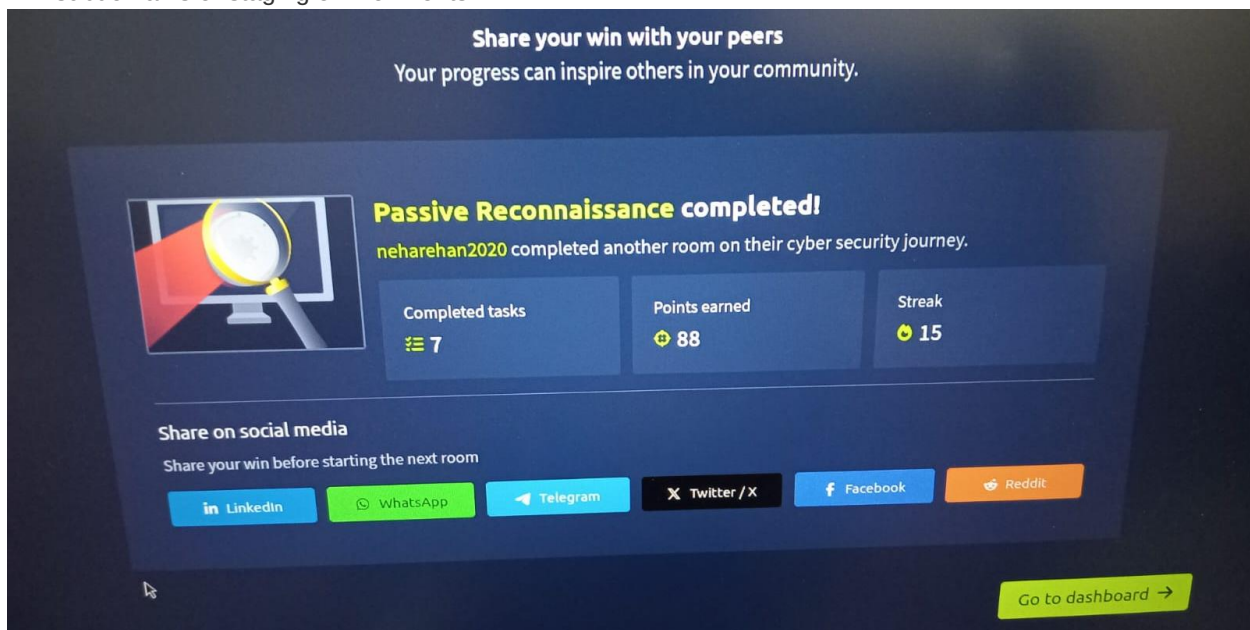

[*] Emails found:
-----
dev-team@nmap.org
security@nmap.org

[*] Hosts found:
-----
scanme.nmap.org:45.33.32.156
```

5. Conclusion & Recommendations

The passive reconnaissance on scanme.nmap.org reveals a lean, well-hardened exterior profile suitable for a designated test server. To maintain security posture, the following measures are recommended:

- Disable Directory Listing: Ensure web servers (e.g., Apache/Nginx) have 'Options -Indexes' configured to prevent indexing of asset directories like /images/.
- Email Harvesting Protection: Conceal technical contact emails on public pages or employ obfuscation techniques to reduce target vectoring for phishing attacks.
- Continuous OSINT Monitoring: Regularly run automated recon scripts to detect unintended exposure of subdomains or staging environments.
